

FAUCET INSTALLATION INSTRUCTIONS

1. Drill ½” hole on the ledge of the sink (this will be the place where the faucet will be installed).
 - On stainless steel sink use a ½ inch steel drill bit.
 - On porcelain steel sink drill 1/8 inch pilot hole with a steel drill bit, finish drilling with 1/2 inch steel drill bit at a low speed.
 - On cast iron use 1/8 in. carbide bit followed by ¼ in. bit and finish with ½ inch bit.
 2. Unscrew brass nut from faucet shank.
 3. Slide the small rubber gasket, round metal base plate and large rubber gasket onto faucet shank.
 4. Insert faucet shank into hole in sink.
 5. From the underside of the sink slide the plastic washer, lock washer and brass nut onto the shank. Check orientation of faucet then tighten brass nut securely.
